TRADING STRATEGY

WST iFOREX consists of three algorithmic logics that can be used to trade forex cross rates. The system is applied on charts that are plotted in Intraday and End-of-Day format. The same rules and parameters per logic are applied to all cross rates and time frames. Leverage used here is around 2 over 1. **Logic no. 1 (End-of-Day)** is a short-term trend following system that has been designed to capture relatively small forex price moves using a very flexible signal-generation logic. **Logic no. 2 (Intraday)** is a breakout logic that has been designed to capture short-term swings in market direction regardless of the long-term dominating trend. **Logic no. 3 (Daytrading)** is a short term trend following model to day trade currency pairs. It does not hold any overnight positions and is applied to a couple of highly liquid currency pairs with tight spreads.

STATISTICS*

Since Mai 2003	205.32%
Last 12 month	6.89%
Year-to-date	6.89%
Performance (annualized)	13.69%
Best month	11.63%
Worst month	-2.69%
Average month	1.14%
Volatility (annualized)	6.43%
Sharpe Ratio	1.82
Sortino Ratio	4.44
Skewness	1.17
Kurtosis	8.37
# Positive month	136
Ø Gain (positive month)	1.81%
Negative month	44
Ø Loss (negative month)	-0.93%
% number of positive month	75.56%
Ø Gain / Ø Loss	1.95
Maximum Draw Down (monthly basis)	-3.90%
VaR (99%) on monthly basis	4.32%

BENCHMARKS

- DJCS HFI (MF) = Dow Jones Credit Suisse Core Hedge Fund Index (Managed Futures)
- ESTX50 = EUROTOXX 50 Index
- REX(P) = REX Performance Index

* The shown results are mainly backtesting results that consider reasonable execution costs (spread, slippage and "rollover charges"). A leverage of around 2 over 1 was used for all statistics. The Equity Graph was calculated WITHOUT Re-Investments. Since 2011 a European FX fund is trading these logics.
